TWO VIEWS OF THE 'OBJECT' PHOTOGRAPHED BY TEENAGED BROTHERS
Ten minutes of hovering, then off 'faster than any of the jets we see from Air Force base'

BROTHERS SEE, PHOTOGRAPH 'UFO

MOUNT CLEMENS, Mich., Jan. 10 (AP)—Two teen-aged brothers report they observed and photographed a disc-shaped flying object which they said hovered for 10 minutes behind their home, and within a mile of Selfridge Air Force Base yesterday.

Dan Jaroslaw, 17, and his brother, Grant, 15, had photographs to support their report of a disc-shaped flying object, slightly domed at the top with what appears to be slim mast at the rear.

The Air Force said it knows nothing of the reported sighting. The Air Force said a Coast Guard helicopter in the area about the same time reported no sighting.

Dan remembers "about five minutes after it (the object) disappeared he saw a helicopter come over the area" and that Grant, who took all the pictures, also photographed it.

[redacted]

The brothers said it raced off to the southeast and disappeared in clouds. Dan said, "We've seen a lot of strange aircraft from the base in the 14 years we've lived here, but never anything like this. It moved faster than any of the jets we see from the base."
